## ABOUT **PACKAGING EXEMPLAR TECHNOLOGY (PVT) LTD**

### **Our Start**

Packaging Exemplar Technology (Pvt) Ltd. established itself in 1996 with a vision to become one of the most preferred business partners and trusted strategic suppliers of plastic products and plastic packaging in Pakistan.

### **What We Envision**

To fulfill its vision, the company is strongly committed to the manufacture of superior quality plastic products and hygienic plastic packaging through our state of the art design, meticulous manufacturing, and rigorous quality control processes. Along with these our impressive customer services and effective logistics help us of attain highest level of customer satisfaction.

### **Our Scope**

Since 1996, the company has been consistently designing and manufacturing a large collection of plastic products and packaging for various business partners ranging from pharmaceutical manufacturers to food manufacturers. Our collective knowledge and expertise in the industry has brought us to be one of the most favorable and strategic suppliers of polyethylene terephthalate (PET) products.

PACKAGING EXEMPLAR  
TECHNOLOGY (PVT) LTD

## IN NUMBERS

Over **70 bottle designs**  
ranging from **25ml to 3000ml**

**5000+** satisfied  
customers

CAPACITY OF OVER  
**450,000**  
BOTTLES PER DAY

- Vast amount of colour options for each design
- Superior product quality through 100% Japanese machinery

## WHAT IS **POLYETHYLENE TEREPHTHALATE (PET)**?

Polyethylene Terephthalate, known commonly as PET or PETE is best known as the clear plastic used for water and soda bottle containers. PET is approved as safe for contact with foods and beverages by the FDA and health-safety agencies throughout the world. The safety of PET for food, beverage, pharmaceutical and medical applications has been repeatedly demonstrated through extensive studies, regulatory approvals, testing, and its widespread acceptance for more than 30 years.

Because of PET's unique properties, it is rapidly becoming the world's preferred packaging material for foods and beverages. Like glass, it is a very strong and inert material that does not react with foods, is resistant to attack by micro-organisms, and will not biologically degrade. But unlike glass, PET is extremely lightweight, easy and efficient to transport, and shatterproof. As a raw material, PET is globally recognized as a safe, non-toxic, strong, lightweight, flexible material that is 100% recyclable. In fact, it's THE most widely recycled plastic in the world!

### **Food and Pharmaceutical Grade Bottling Solutions:**

Packaging Exemplar Technology (Pvt) Ltd. prides itself on its state of the art production methods that ensure 100% food grade bottling solutions. We, at PET, follow our five stage food grade procedure to produce the best quality products.

**100% Virgin PET Resin:** We guarantee that all our products are produced from the best quality resin available and is free from any recycled raw material.

**Single Stage Production Process:** Due to our vast range of modern single stage bottling machinery we have achieved minimum human or environment contact, hence making are products most feasible for food and pharmaceutical industries.

**Food Grade Greasing Technology:** In addition to minimizing human contact, we have ensured that all machine points which are in contact with products are greased with food grade grease specially imported for our quality conscience customers.

**Oil Free Compressors:** During preform blowing, we use special oil free compressors to prevent oil contamination through the blowing air.

**Two Layer Packaging:** In our last stage, we double pack our all bottles to safeguard our products from any external contamination during transportation and warehousing.
